

HYDROGEN PEROXIDE SUPPLY SERVICE

Calgon Carbon Corporation offers full service and supply of various grades and concentrations of Hydrogen Peroxide solutions. Designed around each customer's individual needs, this service ensures that the scheduling of all deliveries provides an uninterrupted supply of Hydrogen Peroxide. Our pricing is always inclusive of freight charges to ensure there are no surprises on the invoice.

Benefits

Calgon Carbon has teamed up with an innovative company that designed a remote monitoring system for chemical usage. This telemetry system can be easily retrofitted to your existing peroxide storage and feed system or supplied with any new storage tank. This system offers remote monitoring of hydrogen peroxide usage, a real-time tank level display, proactive scheduling of deliveries, tracking of deliveries, and verification of dates and amounts of deliveries. We can install this telemetry system at no additional cost with any one of our supply agreements.*

Calgon Carbon can provide on-site inventory monitoring and scheduling of deliveries when it is convenient for you. Calgon Carbon also has the largest network of producers and distributors in North America which means we will always have product available when you need it.

Calgon Carbon can also supply storage and day tanks in a multitude of sizes and within virtually any space restriction. We can design and manufacture a chemical dosing and/or feed system that can easily be retrofitted to new or existing equipment.

Calgon Carbon Advantage

- Deliveries adhere to stiff OSHA requirements and industry guidelines
- Largest network of producers and distributors in North America
- 24 hour emergency response
- 35%, 50% available in standard and NSF grades
- Drivers and technicians are all certified for peroxide handling and usage
- Telemetry system allows for almost complete hands-off management
- Deliveries scheduled to ensure continuous supply of peroxide
- Manufacture and installation of tanks, pump skids, and telemetry systems
- Deliveries from 300 gallon totes to full truck loads

Complete Service

With a fully comprehensive telemetry system installed, Calgon Carbon provides hands-off management for our customers through remote monitoring and local display of tank levels. The telemetry system can provide reports detailing the tank level, amount of delivered and consumed product, as well as dosing rates. This, in time, provides historical data on usage allowing for effective budgeting and supply management. The installation of this monitoring system allows Calgon Carbon to provide scheduling specific to your tank level requirements, and ensures prompt and adequate deliveries each time. The system is equipped with a computer that can be loaded with a customer specific dosing profile to provide further customization to the dosing and monitoring system.

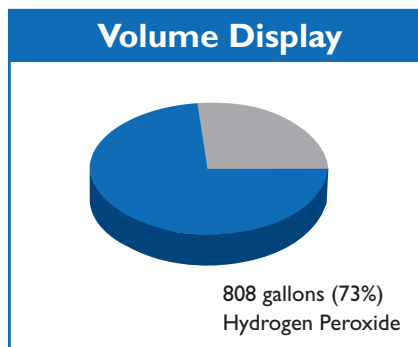

*Calgon Carbon Corporation will install and maintain this telemetry system for as long as the end user and Calgon Carbon Corporation are bound by a supply agreement. The telemetry system will remain the property of Calgon Carbon Corporation.
